Safety notes

- The device must not be used outside the specified field of application, especially not in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the actuator and that is ensured that the ambient conditions remain at any time within the thresholds according to the data sheet.
- Caution: Power supply voltage!
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- Cables must not be removed from the device.
- To calculate the torque required, the specifications supplied by the damper manufacturers concerning the cross-section, the design, the installation site and the ventilation conditions must be observed.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

## Product features

Mode of operation The actuator moves the damper to the operating position at the same time as tensioning the return spring. The damper is turned back to the safety position by spring energy when the supply voltage is interrupted.
Simple direct mounting Simple direct mounting on the damper shaft with a universal shaft clamp, supplied with an anti-rotation device to prevent the actuator from rotating.
Adjustable angle of rotation
Adjustable angle of rotation with mechanical end stops.
High functional reliability
The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.
Flexible signalization With adjustable auxiliary switch ( $0 . . .100 \%$ )

## Starting point: <br> Actuator in safe position

## Procedure

- Turn the knob of the auxiliary switch until the tip of the arrow is pointing to the required switching position (see left). Example: Switching point setting $=.4$ corresponds to $40 \%$ angle of rotation.
- When the actuator runs to the operating position (ccw $\quad$ ), the switch knob will also rotate counter-clockwise (ccw 1 ) and the auxiliary switch will operate as the tip of the arrow passes the scale zero (S1-S3 linked).

## Procedure

- Turn the knob of the auxiliary switch until the tip of the arrow is pointing to the required switching position (see left). Example: Switching point setting $=.4$ corresponds to $40 \%$ angle of rotation.
- When the actuator runs to the operating position (cw ), the switch knob will also rotate clockwise (cw ) and the auxiliary switch will operate as the tip of the arrow passes the scale zero (S1-S3 linked).
